Mentor Dashboard Ops — Product Summary

AstroLink · v0.4.7.0 → v0.5.0.0 · PRs #47–#51 · June 2026

Executive summary

AstroLink's mentor dashboard now tells the truth about money, tracks every bank transfer, shows directory visibility, reads cleanly on mobile, and can flip to Stripe Connect when ops is ready — without another engineering sprint.

Audience	One-line outcome
Engineering (CTO)	Five PRs closed the mentor money/listing/Connect loop: truthful ledger, idempotent manual payout lines, listing visibility, stacked UI, Connect API behind one env flag.
Business (CEO)	Mentors see accurate earnings; ops pays without spreadsheets; experts know if they're live; flip one env var for automated payouts when ready.
Mentor (user)	Earnings shows earned / awaiting / transferred; Profile shows public URL and blockers; Transfer updates when ops pays me.

North star — per-booking mentor journey

1. **Payment recorded** (PR1) — transaction `completed` → Recorded share on Earnings
2. **Session complete** — booking status on ledger row
3. **Transfer** (PR2) — ops mark-paid → `mentor_payout_lines` → Transferred
4. **Public listing** (PR3) — compliance + `is_listed` + preview on Profile
5. **Connect optional** (PR5) — Stripe Express when `ENABLE_STRIPE_CONNECT_PAYOUTS=true`

Steps 1–4 are live in production. Step 5 restores code behind an env flag. Manual payout lines remain source of truth until Stripe payout webhooks ship.

Before vs after

Baseline: **v0.4.6.0** (pre-stack). Shipped: **v0.5.0.0**.

Area	Before (v0.4.6.0)	After (v0.5.0.0)
Earnings summary	“Pending capture” / “Paid out” — misleading for immediate-capture	Recorded share · Awaiting transfer · Transferred
Per-session money	Payment column only; refunds inflated totals	Payment + Transfer columns; refunds excluded
Ops payouts	Spreadsheets outside product	Admin mark-paid + <code>mentor_pay-out_lines</code> audit trail
Directory	No in-dashboard listing state	Public listing card + preview when live
Layout	Squeezed side-by-side on md+ screens	Stacked cards — goals/context full width
Stripe Connect	API returned 503	Restored behind env flag; manual still default

PR1 — Earnings truthfulness

v0.4.7.0 · PR #47

BEFORE

Summary cards said “Pending capture” and “Paid out” — wrong for immediate-capture at booking. Refunded rows still counted toward totals.

AFTER

Cards: **Recorded share · Awaiting transfer · Transferred**. Ledger **Payment** column per row (Recorded / Refunded / Pending / Failed). Refunds excluded from totals.

CTO / ENGINEERING

`summarizeMentorEarnings` buckets match escrow reality; `refundedPayoutCents` tracked separately. Ops guardrails, skills, and plan docs under `docs/plans/mentor-dashboard-ops/`.

CEO / BUSINESS

Mentors trust the numbers on screen — fewer “where’s my money?” tickets. Finance sees the same ledger mentors see. Foundation for paying 50+ experts without spreadsheet chaos.

MENTOR / USER-FACING

On Earnings: I see what I've earned, what's waiting for a bank transfer, and what's already paid — with no phantom money from refunds.

PR2 — Manual payouts + transfer tracking

v0.4.8.0 · PR #48

BEFORE

Ops paid mentors outside the product (spreadsheets). No per-session transfer state in the dashboard.

AFTER

`mentor_manual_payouts` + `mentor_payout_lines` (idempotent `transaction_id`). Admin mark-paid API + **Mentor payouts** panel on `/dashboard/admin`. Ledger **Transfer** column: Awaiting / Transferred.

CTO / ENGINEERING

Admin `GET/POST /api/admin/mentor-payouts` with audit log. `mentor-manual-payouts.ts` reconciles `awaitingTransferCents` vs `transferredCents` from payout lines.

CEO / BUSINESS

Each completed session has an auditable paid/unpaid state. Carlos can mark bank transfers in admin without exporting CSVs. Scales manual payouts at launch.

MENTOR / USER-FACING

Transfer column flips from Awaiting to Transferred after ops sends my share — I don't have to email to ask if I got paid.

PR3 — Public listing visibility

v0.4.9.0 · PR #49

BEFORE

Mentors couldn't see directory listing state, public slug, or compliance blockers from the dashboard.

AFTER

Profile tab **Public listing** card: compliance status, `is_listed`, public URL, preview link when live. Shared `mentor-listing-status.ts` helpers.

CTO / ENGINEERING

Dashboard loads `slug` + `is_listed` from `mentors` row. Header compliance label uses same helper. E2E asserts Chris seed on `/experts/chris-sembroski`.

CEO / BUSINESS

Experts self-serve “am I live on the site?” — faster path from approved → listed. Sales can point mentors to one screen instead of Slack pings.

MENTOR / USER-FACING

Profile tells me if I'm on the expert directory, my public link, and exactly what's blocking me from going live.

PR4 — UI flex sweep (stacked cards)

v0.4.10.0 · PR #50

BEFORE

Consultation cards and civil-servant row used side-by-side columns on md+ — goals, context, and NF-1860 copy got squeezed.

AFTER

Mobile-first stacked layout: full-width goals/context, join CTA on its own row, human-readable booking badges. Civil-servant explanation full-width below checkbox.

CTO / ENGINEERING

`mentor-consultation-card.tsx` + civil servant row in `mentor-dashboard-client.tsx`. No data-model changes.

CEO / BUSINESS

Dashboard looks professional on phone and laptop. Mentors actually read session prep and compliance instructions — less onboarding friction.

MENTOR / USER-FACING

Upcoming sessions show my goals and context clearly; the civil-servant checkbox isn't crammed into a narrow column.

PR5 — Stripe Connect restore (flag-gated)

v0.5.0.0 · PR #51

BEFORE

`POST /api/mentor/stripe-connect` returned 503. Connect CTAs hidden; manual payouts only.

AFTER

Route restored when `ENABLE_STRIPE_CONNECT_PAYOUTS=true`: `onboard` (account link) + `dashboard` (Express login). Launch default unchanged — flag off → 503 + manual payouts message.

CTO / ENGINEERING

Env gate in route + existing `isStripeConnectPayoutsEnabled()` UI gate. `dev_skip` when `SKIP_STRIPE_PAYMENTS`. Unit tests for 503, onboard, dashboard, and error paths.

CEO / BUSINESS

Flip one env var when ready for automated bank payouts — no redeploy of payout logic. Launch stays manual (lower ops risk). Connect is an upgrade path, not a launch blocker.

MENTOR / USER-FACING

Today: ops pays me manually and I track it in Transfer. When Connect is on: I can link my bank and open Stripe's payout dashboard from AstroLink.

Launch knobs (environment flags)

Variable	Value	Behavior
<code>ENABLE_STRIPE_CONNECT_PAYOUTS</code>	<code>false</code> (launch)	503 on Connect API; manual payouts card; UI hides Connect CTAs
<code>ENABLE_STRIPE_CONNECT_PAYOUTS</code>	<code>true</code> (preview/staging)	Onboard + Express dashboard links; respects <code>SKIP_STRIPE_PAYMENTS</code>
<code>SKIP_STRIPE_PAYMENTS</code>	<code>true</code> (local/E2E)	No live Stripe calls; Connect returns <code>dev_skip</code> when flag enabled

Production launch: keep Connect off. **Preview/staging:** enable flag with sandbox Stripe keys only. Never put live Stripe keys in `.env.local` or Preview.

Manual payout ops flow (launch default)

Who	Action	System effect
Mentee	Books + pays	Transaction <code>completed</code> → PR1 Recorded share
Both	Complete video session	Booking status on ledger row
Ops (admin)	Open <code>/dashboard/admin</code> → Mentor payouts	Lists unpaid sessions per mentor
Ops	Mark paid (batch)	Inserts <code>mentor_payout_lines</code> ; mentor sees Transferred
Mentor	Checks Earnings tab	Awaiting → Transferred without email chase

Consciously deferred (not bugs)

- **Stripe payout webhook mirror** — manual lines stay source of truth (decision #11).
- **Connect + manual in same release** — Connect deferred to PR5 behind flag (decision #6).
- **Accounts v2 migration** — Express v1 via ComplianceAgent unchanged.
